
a)
Si crack length / initial [-]
b)
Si roughness ratio [-]
c)
Peak Si surface tangential stress [MPa]
d)
Negative electrode porosity, per-cycle minimum [-]
e)
LLI [% of nominal]
Si SEI, particle surface
Si SEI, crack faces
f)
Cumulative Si contraction strain [-]
EFC since RPT1 [-]
g)
Cumulative crack growth [nm]
Route A (Paris, diffusion stress)
Route B (volume-strain fatigue)
EFC since RPT1 [-]
